

pHin and ThermoSpas Make it Easy to Care for Your Hot Tub

pHin takes the guesswork out of water care with wireless monitoring and phone app

San Jose, Calif. – November 2, 2017 – ConnectedYard, maker of the [pHin Smart Water Care](#) solution, and ThermoSpas® Hot Tub Products, a leading hot tub brand, are teaming up to make hot tub care and maintenance a cinch. pHin is now available directly from the ThermoSpas online store, offering hot tub owners an intelligent and effortless way to ensure their water stays healthy and perfectly balanced.

The pHin Smart Water Care solution takes the guesswork out of pool and hot tub maintenance by combining a wifi-enabled smart monitor and mobile app that monitors water chemistry and temperature 24/7, and notifies customers via smartphone when they need to take action. Customers receive recommendations on how to balance their water so they add only the exact chemicals needed.

“People are busy and often forget to check for properly balanced water. Having an automated monitoring and alert solution makes it much easier to keep water safe and healthy,” said Mark Janes, co-founder and COO of ConnectedYard. “pHin gives ThermoSpas owners peace of mind that their hot tub is well-cared for so they can spend more time enjoying it with family and friends.”

Today, thousands of [customers](#) rely on pHin for easy care and perfectly balanced water. pHin customers rave about how easy it is to use. David Hokeness, a hot tub owner and pHin member says:

“Despite our best efforts, the water in our new hot tub was turning cloudy, foamy and smelled like chlorine. I considered searching for a pool guy, but instead a friend told me about connecting the hot tub to my iPhone with a pHin! It was easy to set up, then pHin took about a day to send me the first test results and solutions. Now it sends me regular updates and reminders to add chemical packages that are color coded. It's so easy. I had one question for customer service and they responded in less than a day. Our tub has been crystal clear since pHin. Thanks for the great product and service!”

ThermoSpas hot tub owners can feel confident in relying on pHin as their primary chemical monitoring system. When a correction is required, pHin prescribes the right amount of chemicals to balance hot tub water. If an issue arises that requires the support of a professional technician for hot tub repairs and physical maintenance, the pHin Mobile App provides one-touch, on-demand access to the ThermoSpas Hot Tub Service Network.

“ThermoSpas is delighted to partner with Connected Yard to offer our customers another innovative solution that makes our hot tubs even easier to maintain. pHin will provide ThermoSpas owners with specific dosing instructions for using ThermoSpas chemicals to maintain water balance. pHin will help our customers thoroughly protect their ThermoSpas investment,” said Karl Kleinbach, Vice President and General Manager of ThermoSpas.

For more information or to purchase pHin, go to the [ThermoSpas](#) online store or the [pHin](#) website.
